DETAILED ACTION

The abstract of the disclosure is objected to because on page 38, line 3, "the fresh developer chamber 46" is not consistent with a "fresh toner chamber 46" in line 2 of the same page. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakajima (6,363,233).

Nakajima discloses a toner cartridge 1 that reads on the instant invention's developer container including a fresh toner chamber 3 that stores fresh toner therein and a waste toner chamber 4 that stores the waste toner delivered from a cleaning unit.

Art Unit: 2852

The waste toner chamber 4 is within the toner cartridge in a portion that reads on the instant invention's hollow elongated outer body. An inner wall 2c partitions the inner space into the fresh toner chamber 3 and the waste toner chamber 4. The inner wall 2c reads on the instant invention's partition wall. As shown in Figure 2A, a width, in the horizontal direction substantially perpendicular to the longitudinal direction, of the interior of the fresh toner chamber 3 at an arbitrary vertical position along the partition wall 2c is substantially equal to or less than a corresponding width at another position below the arbitrary vertical position in a state where the toner cartridge 1 is detachably mounted in the print cartridge 9 (Fig. 3A) in which is mounted in an electrophotographic printer (note column 1, lines 9-13). Note column 4, lines 26-43; and column 5, lines 13-21.

Allowable Subject Matter

Claims 2-7, 9, and 10 are allowed over the prior art of record.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nakajima (671), Ishida et al., Takai et al., Hayashi et al., and Okamoto et al. disclose art in developing devices or waste toner collecting devices.
